Date  
October 2022

We are free-to-play play-and-earn TWA  
using TON blockchain technologies with  
a clear UX

# The problem

The main problem we decided to deal with is poor UX in web3 games. It's hard to connect a wallet and download third-party applications. These difficulties discourage users from playing web3 games.

# Solution

Our application offers an intuitive interface, an easy login to the game without the need to download additional applications and an easy connection to the wallet.

## **What do we offer**

When the user launches the bot, each player is given 100 game coins and a dDog character with an initial level. This is enough to start playing and winning. There will be several single and multiplayer games to choose from.

---

# Games

In single games, you can earn only game coins, and in multiplay games, both game coins and real TON coins. Both players make the same bet amount, the winner takes everything (minus a small commission to the game).

The amount of the reward depends on the level of the character, and on his characteristics.

# Marketplace

Characteristics give advantages in mini-games. They can be obtained by raising the level or buying NFT in the form of clothing. The NFT attributes contain all the characteristics. You can change your clothes in the wardrobe, and you can buy new ones in the built-in marketplace.

# Roadmap

- 1W - All mini-games will run inside our app
- 1W - Each NFT will have a limited number of uses in games per day. This way players will buy and sell them more
- 1W - Redesign
- 3W - Internal wallet
- 1M - Animated NFT character
- 1M - Several characters
- 1M - A player can level up by paying a certain amount of game tokens
- 1M - Adding new games
- 2M - In the future, the game currency will be our own token issued on TON. When the level increases, some of the tokens are burned.
- 3M - Third-party developers will be able to add their games via the Endpoint API. With each game played, the developer of this game receives a portion of the coins
